If you're planning to pursue a career as a graphic designer, you already know that Photoshop training will be a central part of your learning experience. And if you're planning a career as a visual effects artist in film or television, you know how important Photoshop training is to get your first job. But many people don't know that Adobe Photoshop is the design tool of choice for all professionals who work with images-dentists, architects, and archaeologists all depend on Photoshop training to achieve their full potential.

Even if you're an amateur photographer or videographer whose goal is simply to get more out of your photos and videos, Photoshop training is the best investment you can make in your hobby. An ability to get the most out of your Photoshop software will reward you with a lifetime of fulfillment when you learn how to create professional-caliber graphics-whether you need them for your career portfolio or just for an email greeting card to your friends.

Here's what you should look for in an introductory Photoshop training course:

How to get around the work area: The first thing you need to learn is how to work with the file browser-Adobe Bridge-and how to navigate the work space. As soon as you're comfortable doing this, you'll learn how to create and work with Photoshop files. You'll learn about the different file formats in Photoshop, how to scan photos and artwork, and how to use the menu and tool bars. And right at the beginning it's important to start learning and using keyboard shortcuts. **How to work with tools and images:** Once you know how to work with Photoshop files and the menu, you'll start learning how to use all the individual tools and how to use palettes. You'll learn how to align images and how to use the masks. An introductory Photoshop training course will also teach you how to create thumbnails.

How to work with color: Once you know how to use the tools and palettes, you'll learn about basic color theory, how to use the color picker, how to use the info palette, and how to use the eyedropper.

How to work with selections: Once you've learned how to use the color tools, you'll learn how to select objects, how to transform selections and content, and how to use quick masks.

How to work with layers: You'll learn all about working with layers, how to blend layers, and how to get the most out of different layer styles. You'll start learning how to retouch photos and other images, and how to use the history palette. When you've completed this part of the course, you'll be ready to learn how to paint. If you've been wondering how to get more out of your digital photos and online videos, sign up for Photoshop training today. Discover how Photoshop can help you achieve your full potential, whether you're a professional architect or a weekend photographer. You'll be glad you did.
